

## Business Challenges

- Low development efficiency due to unsynchronized data silos (recipe data in external system and logistic data in SAP software, label information in separate system)
- Noncompliant products due to missing compliance checks during early product development phase
- Jeopardized product margin due to missing product cost transparency
- Slow time to market due to cumbersome product change and creation processes

SI PRO Consulting supports you in meeting your product development challenges to improve your existing processes and actively take advantage of new opportunities. We support you in all phases, from problem analysis, blue printing, realization and implementation to service and maintenance.

## SAP-qualified implementation services for rapid-deployment solutions

### SI PRO Consulting Implementation services for SAP PLM for Process Manufacturing rapid-deployment solution

#### SAP Recipe Development within 10 weeks

The rapid-deployment solution (RDS) for process manufacturing industries helps to manage your product formulations supported by recipe development functionality in SAP Product Lifecycle Management. It supports first idea to final product, through structured product specifications and adoption of the company-wide definition of the recipe at a detailed level.

#### Business benefits:

- Centrally store all product development information (product and process) - single source of truth
- Verify product compliance within development activities
- Perform cost calculations for each iteration of product development
- Effectively manage product variations
- Use labeling functionality that fully leverages the data developed within recipe development

#### SAP RDS Structure

## SAP-qualified implementation services for rapid-deployment solutions

### Measurable success:

- Minimized efforts
- Shorter time to market
- Improved product compliance
- More accurate product cost estimates

### Solution scope:

#### Specification Management

Support the development of specifications for product development and management using a sophisticated user interface.

#### Formulation Development

Manage and develop product and process data from design through product launch.

#### Supporting functions

To support recipe development activities, the following supporting functions are available:

- WWI-reporting (Windows Word Processor Integration) for specifications and recipes
- Compliance check for specifications and recipes

#### Product Labeling

Get support in your product labeling process by efficiently supporting the declaration of:

- Ingredient information
- Quantitative information on product components
- Qualitative product information (e.g. list of ingredients) for package labeling
- Different end-consumer package sizes for one product
- Multilingual label sets

### What do we deliver?

#### Service

- Installation check
- Workshop to confirm the predefined requirements
- Project documents: Work breakdown structure (WBS), including a project schedule, test scripts, and scoping questionnaire
- Implementation of selected basic calculations (e.g. composition and estimated price)
- Activation and unit testing of the SAP PLM rapid-deployment solution in the development system, based on the selected packages
- Knowledge transfer to key users on configured SAP PLM rapid-deployment solution
- Support for going live

#### Time

- Implementation duration: 9-10 weeks

#### Cost

- Fixed price: 39.000€ (per instance, tax-exclusive)

### What do you need to do?

- Provide the IT infrastructure
- Install SAP PLM 7.02 (delivered with SAP ERP, EHP6) on the development and production systems
- Provide fix contact people in the business and IT departments
- Implement handover to manufacturing
- Conduct end-user training and change management
- Conduct performance and integration testing
- Migrate and cleanse data
- Transport to production systems
