

## SAP EH&S Management Solutions: Product and specifications management

## Business process integration solutions SI PRO Consulting

### Improve your master data consistency and supply chain compliance

- How can your company consistently manage and fully integrate product and raw material data with logistic and FI/CO data?
- How can changes, authorizations and multi-lingual user profiles be sensibly implemented in the product data management?
- How can the quality and consistency of your master data be improved and ensured?
- How can regulatory information like laws on product safety, dangerous goods management, occupational health and chemical legislations be best managed and implemented?
- What solutions are available? How can you most efficiently use your SAP infrastructure?

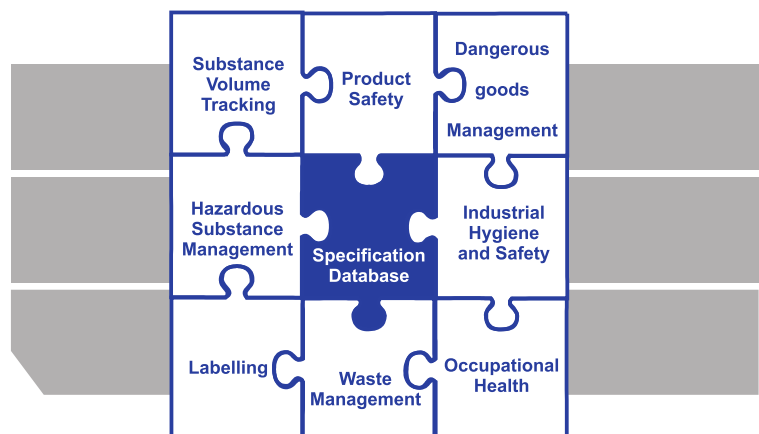

SAP EH&S Management is scalable from the demands of a SME up to the complex requirements of an internationally operating, diversified corporation. Simply share your requirements with us – we will happily develop an offer tailored to the needs of your company.

SAP EH&S Management provides a central and consolidated database to manage multi-use technical specifications.

Logistic and commercial information for products and product inputs can be completed with SAP EH&S Management by technical and regulatory properties. All available product information across the whole supply chain is then managed centrally, consistently and in a scalable manner.

With the help of SAP EH&S Management, historically grown heterogeneous system landscapes with custom developments, fulfilling past specific requirements from your production, product development or product safety departments, can be easily structured and ported to SAP standard; allowing to keep the IT-infrastructure of your company in a longstanding state of the art.

## SAP EH&S Dangerous Goods Management with integration to Sales & Distribution

Sales and distribution of products classified as dangerous goods is subject to a large number of regulatory restrictions. The compliance with those restrictions can prove very resource intensive. SAP EH&S Dangerous Goods Management allows assigning of all necessary dangerous goods information required by regulations worldwide for any possible mode of transport to your products and raw materials. The compliance with dangerous goods regulations can be monitored via specific dangerous goods checks, realized directly in the Sales & Distribution module – starting with the creation of a sales order all the way to picking of your delivery and printing of the delivery note.

## SAP EH&S Hazardous Substance Management

Manage the hazardous substances produced or occurring in your production with SAP EH&S.

The component Hazardous Substance Management allows meeting all functional and regulatory requirements.

SAP EH&S optimizes your supply chain compliance - from maintaining labelling requirements, through the authoring of safety data sheet documents, to managing of hazardous substance warehouses.

## SAP EH&S Management Solutions: Product and specifications management

### SAP EH&S Specification Database

The SAP EH&S Specification Database is the most important component of the SAP EH&S module. Here, specification data records are managed including various technical and regulatory pieces of information; like data on raw materials, products, compositions, risks or exposure. Via a multitude of built-in interfaces this data can be provided to other applications or integrated in automatically generated specification documents, which then are posted to the addressee – e.g. as technical specification documents, product data sheets or safety data sheets.

SAP central components, like Business Partner Management or the Document Management System are also directly integrated with SAP EH&S.

### SAP EH&S Industrial Hygiene and Safety with SAP HCM integration

Improve working environment safety in your company with SAP EH&S. From recording work-safety relevant events in the incident log, through managing risks and exposures in the Specification Database, to the work area risk assessment.

SAP EH&S provides a set of powerful tools for optimization of management processes and data consistency of your corporate safety. A number of interfaces to components Human Capital Management, Organization Management and Business Partner Administration exist to precisely monitor work-safety relevant issues in your company
